General Safety Summary

Review the following safety precautions to avoid injury and prevent damage to this product or any products connected to it. To avoid potential hazards, use this product only as specified.

Only qualified personnel should perform service procedures.

While using this product, you may need to access other parts of the system. Read the General Safety Summary in other system manuals for warnings and cautions related to operating the system.

To Avoid Fire or Personal Injury

Use Proper Power Cord. Only use the power cord specified for this product and certified for the country of use.

Observe All Terminal Ratings. To avoid fire or shock hazard, observe all ratings and markings on the product. Consult the product manual for further ratings information before making connections to the product. Do not apply a potential to any terminal, including the common terminal that exceeds the maximum rating of that terminal.

Do Not Operate Without Covers.

Do not operate this product with covers or panels removed.

Avoid Exposed Circuitry. Do not touch exposed connections and components when power is present.

Do Not Operate with Suspected Failures.

If you suspect there is damage to this product, have it inspected by qualified service personnel.

Do Not Operate in Wet/Damp Conditions. Do Not Operate in an Explosive Atmosphere. Keep Product Surfaces Clean and Dry

Caution statements identify conditions or practices that could result in damage to this product or other property.

HW	Hardware
SI	Signal Integrity
Sim	Simulation
SW	Software

Introduction

The ML-CMIS GUI is a common software interface that allows to communicate with, operate and control various MCBs boards. It allows to utilize a common software across a variety of form factors. The ML-CMIS GUI communicate with the host board through USB connection. The communication is established after installing the proper driver of the target host.

The ML-CMIS GUI allows to communicate on multiple hosts simultaneously, by assigning different USB instance to each host.

The various hosts operating with the ML-CMIS GUI are listed below:

- QDD Host
- QDD host
- OSFP host
- QSFP host
- SFP-DD host
- DSFP host

GUI Introduction

1. Installation & Running

The GUI installation file is available on the website. User could download it under the target product page.

To install the GUI, simply double-click on the installer file, and follow the instructions. For Windows version newer than Windows 7 the GUI must be run as administrator. A message box will pop-up for confirmation.

Figure 1: Pop-up message

After the GUI runs properly, a window will open as shown below.

Figure 2: GUI Window

2. CMIS Version

The GUI covers the CMIS 3.0 and CMIS 4.0. The user must choose the CMIS version first.

Figure 3: CMIS Version Selection

By clicking on the button shown above, the user can switch between CMIS 3.0 and CMIS 4.0. Depending on the CMIS Version chosen by the user, the list of devices will change. Below is a summary of supported hosts based on CMIS version.

- CMIS Version 3.0
 - QDD Host
 - OSFP Hosts (ML4064-TR is under the OSFP family)
- CMIS Version 4.0
 - QDD Hosts (ML4062-TR is under the QDD family)
 - OSFP Hosts (ML4064-TR is under the OSFP family)
 - QSFP Host
 - SFP-DD Host
 - DSFP Host

3. Communication

The communication between the GUI and the host is established from the Communication window. Under this window, the user can select the Device Type and the USB instance.

The connection is established by clicking the Initialize button. This button is the application main entry point. Once a USB connection is established, the Host checks if a Module is inserted, and accordingly illuminates the corresponding (Module Found or Module Not Found) LED. If a Module is inserted, the initialization process proceeds with checking the related Hardware pins to ensure that the module is selected and ready to communicate with host.

Also, the following buttons are available in the Communication window.

Refresh button: Checks for connection status, refresh Hardware Readings and updates GUI.

Pause Monitor button: Pause/Resume monitoring.

About Us button: Shows software information (name, version) and company information.

Figure 2: Communication Tab

4. GUI Sections

The ML-CMIS GUI contains the following tabs:

- Monitor
- Interrupt Masks
- Controls
- Low Speed Signals
- Identification
- Options Available
- Load/Save MSA
- Load/Save Page 10/11h
- I2C R/W
- I2C R/W Advanced
- DVT
- QDD-MXP (only for QSFP-DD Host)

All these tabs are common for all hosts. The subsequent sections will cover each tab separately. Any difference between various hosts in a specific tab will be mentioned explicitly.

4.1 Monitor

The Monitor tab shows the digital diagnostic monitoring flags status.

All alarms and warnings are expressed with LEDs as shown in Figure 5, when a flag is asserted, the corresponding LED turns ON (becomes red), when not asserted the LED remains transparent.

Also, the Monitor tab shows measurements of various monitoring values (voltage, current and temperature) and are displayed continuously.

Two main measurements windows are available:

- 1 - Module Monitor
- 2 - MCB Monitor

Note that the measured quantities differ from MCB to another depending on the implementation.

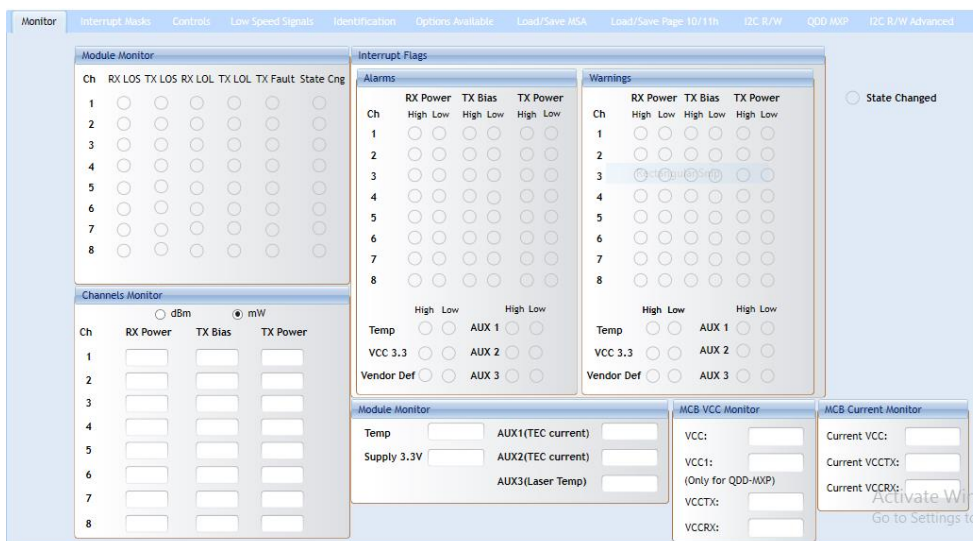

Figure 5: Monitor Tab

The following table shows the MSA memory mapping for the monitoring tab objects.

Byte	Bit	Name	Description	Type
14	7-0	Module Monitor 1: Temperature MSB	Internally measured temperature: signed 2's complement in 1/256 degree Celsius increments NOTE: Temp can be below 0.	RO Opt.
15	7-0	Module Monitor 1: Temperature1 LSB		
16	7-0	Module Monitor 2: Supply 3.3-volt MSB	Internally measured 3.3 volt input supply voltage: in 100 µV increments	RO Opt.
17	7-0	Module Monitor 2: Supply 3.3-volt LSB		
18	7-0	Module Monitor 3: Aux 1 MSB	TEC Current or Reserved monitor TEC Current: signed 2's complement in 1/32767% increments of maximum TEC current +32767 is max TEC current (100%) – Max Heating -32767 is min TEC current (100%) – Max Cooling	RO Opt.
19	7-0	Module Monitor 3: Aux 1 LSB		
20	7-0	Module Monitor 4: Aux 2 MSB	TEC Current or Laser Temperature monitor TEC Current: signed 2's complement in 1/32767% increments of maximum TEC current +32767 is max TEC current (100%) – Max Heating -32767 is min TEC current (100%) – Max Cooling Laser Temperature: signed 2's complement in 1/256 degree Celsius increments See Page 01h Byte 145 Table Table 8-30	RO Opt.
21	7-0	Module Monitor 4: Aux 2 LSB		
22	7-0	Module Monitor 5: Aux 3 MSB	Laser Temperature or additional supply voltage monitor Laser Temperature: signed 2's complement in 1/256 degree Celsius increments Additional supply voltage monitor: in 100 µV increments See Page 01h Byte 145 Table Table 8-30	RO Opt.
23	7-0	Module Monitor 5: Aux 3 LSB		
24	7-0	Module Monitor 6: Custom MSB	Custom monitor	RO Opt.
25	7-0	Module Monitor 6: Custom LSB		
8	7	L-CDB block 2 complete	Latched flag to indicate completion of the CDB command for CDB block 2. Clear on Read (See Page 01h, Byte 163 bit 7)	RO Opt.
	6	L-CDB block 1 complete	Latched flag to indicate completion of the CDB command for CDB block 1. Clear on Read (See Page 01h, Byte 163 bit 6)	RO Opt.
	5-3	Reserved		RQD
	2	Data Path firmware fault	Some modules may contain an auxiliary device for processing the transmitted and received signals (e.g. a DSP). The Data Path Firmware Fault flag becomes set when an integrity check of the firmware for this auxiliary device finds an error.	RO Opt.
	1	Module firmware fault	The Module Firmware Fault flag becomes set when an integrity check of the module firmware finds an error. There are several possible causes of the error such as program memory becoming corrupted and incomplete firmware loading.	RO Opt.
	0	L-Module state changed flag	Latched Indication of change of Module state (see Table 8-5) Clear on Read	RO RQD
9	7	L-Vcc3.3v Low Warning	Latched low 3.3 volts supply voltage warning flag. Clear on Read	RO Opt.
	6	L-Vcc3.3v High Warning	Latched high 3.3 volts supply voltage warning flag. Clear on Read	
	5	L-Vcc3.3v Low Alarm	Latched low 3.3 volts supply voltage alarm flag. Clear on Read	
	4	L-Vcc3.3v High Alarm	Latched high 3.3 volts supply voltage alarm flag. Clear on Read	
	3	L-Temp Low Warning	Latched low temperature warning flag. Clear on Read	
	2	L-Temp High Warning	Latched high temperature warning flag. Clear on Read	
	1	L-Temp Low Alarm	Latched low temperature alarm flag. Clear on Read	
	0	L-Temp High Alarm	Latched high temperature alarm flag. Clear on Read	

10	7	L-Aux 2 Low Warning	Latched low warning for Aux 2 monitor. Clear on Read	RO Opt.
	6	L-Aux 2 High Warning	Latched high warning for Aux 2 monitor. Clear on Read	
	5	L-Aux 2 Low Alarm	Latched low alarm for Aux 2 monitor. Clear on Read	
	4	L-Aux 2 High Alarm	Latched high alarm for Aux 2 monitor. Clear on Read	
	3	L-Aux 1 Low Warning	Latched low warning for Aux 1 monitor. Clear on Read	
	2	L-Aux 1 High Warning	Latched high warning for Aux 1 monitor. Clear on Read	
	1	L-Aux 1 Low Alarm	Latched low alarm for Aux 1 monitor. Clear on Read	
	0	L-Aux 1 High Alarm	Latched high alarm for Aux 1 monitor. Clear on Read	
11	7	L-Vendor Defined Low Warning	Latched low warning for Vendor Defined Monitor. Clear on Read	RO Opt.
	6	L-Vendor Defined High Warning	Latched high warning for Vendor Defined Monitor. Clear on Read	
	5	L-Vendor Defined Low Alarm	Latched low alarm for Vendor Defined Monitor. Clear on Read	
	4	L-Vendor Defined High Alarm	Latched high alarm for Vendor Defined Monitor. Clear on Read	
	3	L-Aux 3 Low Warning	Latched low warning for Aux 3 monitor. Clear on Read	
	2	L-Aux 3 High Warning	Latched high warning for Aux 3 monitor. Clear on Read	
	1	L-Aux 3 Low Alarm	Latched low alarm for Aux 3 monitor. Clear on Read	
	0	L-Aux 3 High Alarm	Latched high alarm for Aux 3 monitor. Clear on Read	
12	7-0	Reserved		
13	7-0	Custom		
Byte	Bit	Name	Description	Type
134	7	L-Data Path State Changed flag, host lane 8	Latched Data Path State Changed flag for host lane 8	RO/COR RQD
	6	L-Data Path State changed flag, host lane 7	Latched Data Path State Changed flag for host lane 7	
	5	L-Data Path State Changed flag, host lane 6	Latched Data Path State Changed flag for host lane 6	
	4	L-Data Path State Changed flag, host lane 5	Latched Data Path State Changed flag for host lane 5	
	3	L-Data Path State Changed flag, host lane 4	Latched Data Path State Changed flag for host lane 4	
	2	L-Data Path State Changed flag, host lane 3	Latched Data Path State Changed flag for host lane 3	
	1	L-Data Path State Changed flag, host lane 2	Latched Data Path State Changed flag for host lane 2	
	0	L-Data Path State Changed flag, host lane 1	Latched Data Path State Changed flag for host lane 1	
135	7	L-Tx8 Fault flag	Latched Tx Fault flag, media lane 8	RO Opt.
	6	L-Tx7 Fault flag	Latched Tx Fault flag, media lane 7	
	5	L-Tx6 Fault flag	Latched Tx Fault flag, media lane 6	
	4	L-Tx5 Fault flag	Latched Tx Fault flag, media lane 5	
	3	L-Tx4 Fault flag	Latched Tx Fault flag, media lane 4	
	2	L-Tx3 Fault flag	Latched Tx Fault flag, media lane 3	
	1	L-Tx2 Fault flag	Latched Tx Fault flag, media lane 2	
	0	L-Tx1 Fault flag	Latched Tx Fault flag, media lane 1	
136	7	L-Tx8 LOS flag	Latched Tx LOS flag, lane 8	RO Opt.
	6	L-Tx7 LOS flag	Latched Tx LOS flag, lane 7	
	5	L-Tx6 LOS flag	Latched Tx LOS flag, lane 6	
	4	L-Tx5 LOS flag	Latched Tx LOS flag, lane 5	
	3	L-Tx4 LOS flag	Latched Tx LOS flag, lane 4	
	2	L-Tx3 LOS flag	Latched Tx LOS flag, lane 3	
	1	L-Tx2 LOS flag	Latched Tx LOS flag, lane 2	
	0	L-Tx1 LOS flag	Latched Tx LOS flag, lane 1	
137	7	L-Tx8 CDR LOL flag	Latched Tx CDR LOL flag, lane 8. Clear on Read	RO

	6	L-Tx7 CDR LOL flag	Latched Tx CDR LOL flag, lane 7. Clear on Read	Opt.
	5	L-Tx6 CDR LOL flag	Latched Tx CDR LOL flag, lane 6. Clear on Read	
	4	L-Tx5 CDR LOL flag	Latched Tx CDR LOL flag, lane 5. Clear on Read	
	3	L-Tx4 CDR LOL flag	Latched Tx CDR LOL flag, lane 4. Clear on Read	
	2	L-Tx3 CDR LOL flag	Latched Tx CDR LOL flag, lane 3. Clear on Read	
	1	L-Tx2 CDR LOL flag	Latched Tx CDR LOL flag, lane 2. Clear on Read	
	0	L-Tx1 CDR LOL flag	Latched Tx CDR LOL flag, lane 1. Clear on Read	
138	7	L-Tx8 Adaptive Input Eq Fault Lane 8 flag	Latched Tx Adaptive Input Eq. Fault Lane 8. Clear on Read	RO Opt.
	6	L-Tx7 Adaptive Input Eq Fault Lane 7 flag	Latched Tx Adaptive Input Eq. Fault Lane 7. Clear on Read	
	5	L-Tx6 Adaptive Input Eq Fault Lane 6 flag	Latched Tx Adaptive Input Eq. Fault Lane 6. Clear on Read	
	4	L-Tx5 Adaptive Input Eq Fault Lane 5 flag	Latched Tx Adaptive Input Eq. Fault Lane 5. Clear on Read	
	3	L-Tx4 Adaptive Input Eq Fault Lane 4 flag	Latched Tx Adaptive Input Eq. Fault Lane 4. Clear on Read	
	2	L-Tx3 Adaptive Input Eq Fault Lane 3 flag	Latched Tx Adaptive Input Eq. Fault Lane 3. Clear on Read	
	1	L-Tx2 Adaptive Input Eq Fault Lane 2 flag	Latched Tx Adaptive Input Eq. Fault Lane 2. Clear on Read	
	0	L-Tx1 Adaptive Input Eq Fault Lane 1 flag	Latched Tx Adaptive Input Eq. Fault Lane 1. Clear on Read	
139	7	L-Tx8 Power High alarm	Tx output power High Alarm, media lane 8. Clear on Read	RO Opt.
	6	L-Tx7 Power High alarm	Tx output power High Alarm, media lane 7. Clear on Read	
	5	L-Tx6 Power High alarm	Tx output power High Alarm, media lane 6. Clear on Read	
	4	L-Tx5 Power High alarm	Tx output power High Alarm, media lane 5. Clear on Read	
	3	L-Tx4 Power High alarm	Tx output power High Alarm, media lane 4. Clear on Read	
	2	L-Tx3 Power High alarm	Tx output power High Alarm, media lane 3. Clear on Read	
	1	L-Tx2 Power High alarm	Tx output power High Alarm, media lane 2. Clear on Read	
	0	L-Tx1 Power High alarm	Tx output power High Alarm, media lane 1. Clear on Read	
140	7	L-Tx8 Power Low alarm	Tx output power Low alarm, media lane 8. Clear on Read	RO Opt.
	6	L-Tx7 Power Low alarm	Tx output power Low alarm, media lane 7. Clear on Read

4.2 Interrupt Masks

Masks shown in this tab are used to prevent a specified flag of generating an interrupt (IntL) when asserted and prevent continued interruption from on-going conditions.

When a mask is set, an interrupt will not be asserted by the corresponding (Alarm/Warning) latched flag bit.

All Masking bits are volatile and will be reset (set to 0) on module startup.

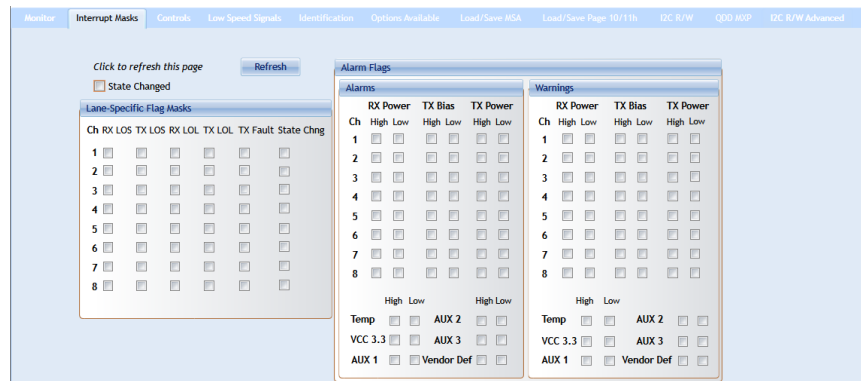

Figure 3: Interrupt Masks Tab

The table below shows the corresponding MSA mapping for the interrupt flags.

Byte	Bits	Name	Description	Type
213	7	M- Data Path State Changed flag mask, host lane 8	Masking bit for Data Path State Changed flag, host lane 8	RW RQD
	6	M-Data Path State Changed flag mask, host lane 7	Masking bit for Data Path State Changed flag, host lane 7	
	5	M-Data Path State Changed flag mask, host lane 6	Masking bit for Data Path State Changed flag, host lane 6	
	4	M-Data Path State Changed flag mask, host lane 5	Masking bit for Data Path State Changed flag, host lane 5	
	3	M-Data Path State Changed flag mask, host lane 4	Masking bit for Data Path State Changed flag, host lane 4	
	2	M-Data Path State Changed flag mask, host lane 3	Masking bit for Data Path State Changed flag, host lane 3	
	1	M-Data Path State Changed flag mask, host lane 2	Masking bit for Data Path State Changed flag, host lane 2	
	0	M-Data Path State Changed flag mask, host lane 1	Masking bit for Data Path State Changed flag, host lane 1	
214	7	M-Tx8 Fault flag mask	Masking bit for Tx Fault flag, media lane 8	RW Opt.
	6	M-Tx7 Fault flag mask	Masking bit for Tx Fault flag, media lane 7	
	5	M-Tx6 Fault flag mask	Masking bit for Tx Fault flag, media lane 6	
	4	M-Tx5 Fault flag mask	Masking bit for Tx Fault flag, media lane 5	
	3	M-Tx4 Fault flag mask	Masking bit for Tx Fault flag, media lane 4	
	2	M-Tx3 Fault flag mask	Masking bit for Tx Fault flag, media lane 3	
	1	M-Tx2 Fault flag mask	Masking bit for Tx Fault flag, media lane 2	
	0	M-Tx1 Fault flag mask	Masking bit for Tx Fault flag, media lane 1	
215	7	M-Tx8 LOS flag mask	Masking bit for Tx LOS flag, lane 8	RW Opt.
	6	M-Tx7 LOS flag mask	Masking bit for Tx LOS flag, lane 7	
	5	M-Tx6 LOS flag mask	Masking bit for Tx LOS flag, lane 6

4.3 Controls

The control fields allow the host to dynamically change the behavior of the device. It allows the user to control Tx Input Equalization, Rx amplitude, Rx Pre-Cursor and Rx Post-Cursor.

The User should follow this procedure:

- Set values to the control fields.
- Apply the configuration by selecting either ApplyDataPathInit or ApplyImmediate.
- Press one of the 2 buttons (Apply All or Apply Lane) depending on user need.
- The module copies the data to the Active set.
- If the DataPathPwrUp is set, this applied configuration will be applied to the hardware.

Also this tab allows the user to control the module voltage, in case of the MCB is supplied by dual supply (5V and 3.3V). Three voltage levels are available: 3.15V, 3.3V and 3.45V.

Figure 4: MCB Voltage Control

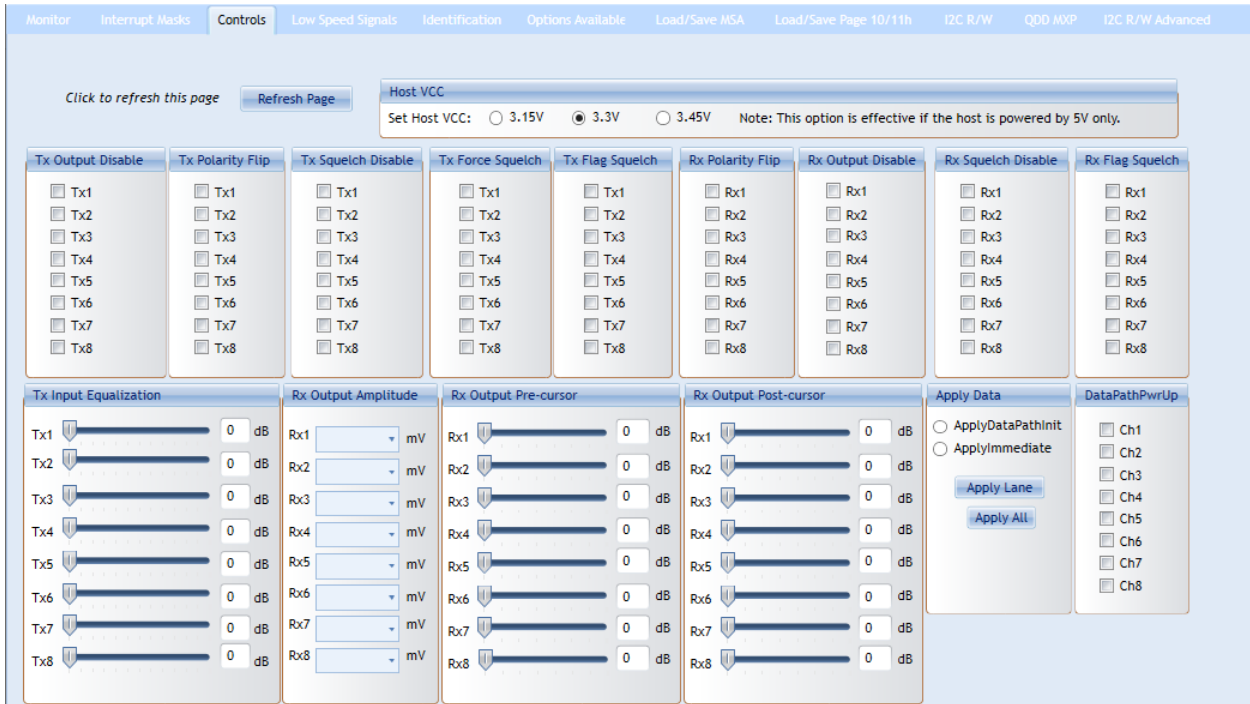

Figure 5: Control Tab

The following table shows the corresponding registers, along with their names and description.

Byte	Bit	Name	Description	Type
128	7	DataPathDeinit Host Lane 8	Data Path initialization control for host lane 8 0b=Initialize the data path associated with host lane 8 1b=Deinitialize the data path associated with host lane 8	RW RQD
	6	DataPathDeinit Host Lane 7	Data Path initialization control for host lane 7 0b=Initialize the data path associated with host lane 7 1b=Deinitialize the data path associated with host lane 7	
	5	DataPathDeinit Host Lane 6	Data Path initialization control for host lane 6 0b=Initialize the data path associated with host lane 6 1b=Deinitialize the data path associated with host lane 6

4.4 Low Speed Signals

This tab allows to control and monitor the HW signals, depending on the selected device. The sections below define the control signals for each group of devices that share the same HW signals, separately.

4.4.1 QDD Family

This family includes MCBs like ML4062-MCB, ML4062-MCB-MXP and ML4062-TR.

Module Input signals:

LPMoDe:

- If set to Low: Module is in High Power Mode
- If set to High: Module is in Low Power Mode

ResetL:

- If set to Low: Module is in Reset state
- If set to High: Module is out of Reset state

ModSelL:

- If set to Low: Module is selected and I2C communication is active
- If set to High: Module is not selected and I2C communication is inactive

Module Output signals:

IntL:

- If Read Low: interrupt source is present
- If Read High: no interrupt source is present

ModPrsL:

- If Read Low: Module is physically present
- If Read High: Module is physically absent

Get button is used to read the current state of these signals.

Figure 7: QDD HW Signals

4.4.2 OSFP Family

This family includes MCBs like ML4064-MCB, ML4064-TR.

Module Input signals:

LPWn:

- If set to Low: Module is in Low Power Mode
- If set to High: Module is in High Power Mode

RSTn:

- If set to Low: Module is in Reset State
- If set to High: Module is out of Reset State

Module Output signals:

PRSn:

- If Read Low: Module is physically present
- If Read High: Module is physically absent

INT:

- If Read Low: interrupt source is present
- If Read High: no interrupt source is present

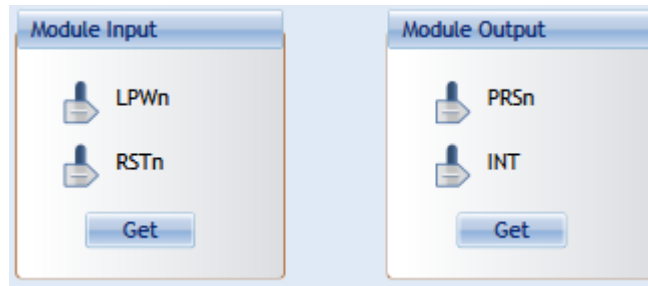

Figure 8: OSFP HW Signals

4.4.3 DSFP Family

The DSFP family includes the ML4019-MCB board.

The control signals of this family are similar to those in OSFP. Refer to section 5.4.2 for more details.

4.4.4 QSFP Family

This includes MCB like ML4041K.

Module Input signals:

LPMode:

- If set to Low: Module is in High Power Mode
- If set to High: Module is in Low Power Mode

ResetL:

- If set to Low: Module is in Reset state
- If set to High: Module is out of Reset state

ModSel:

- If set to Low: Module is selected and I2C communication is active
- If set to High: Module is not selected and I2C communication is inactive

Module Output signals:

IntL:

- If Read Low: interrupt source is present
- If Read High: no interrupt source is present

ModPrsL:

- If Read Low: Module is physically present
- If Read High: Module is physically absent

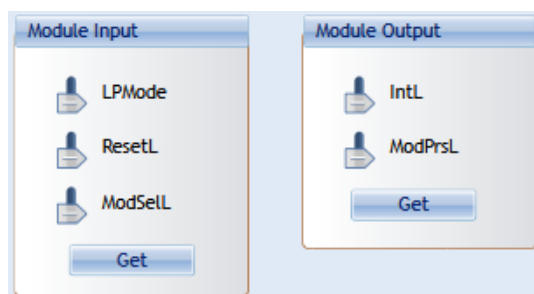

Figure 9: QSFP HW Signals

4.4.5 SFP-DD Family

This includes MCB like ML4022-MCB.

Module Input signals:

LPMODE:

- If set to Low: Module is in High Power Mode
- If set to High: Module is in Low Power Mode

TxDisable0/ TxDisable1:

- Set to Low or High by the user for CH0 and CH1 respectively

Module Output signals:

TxFault0/TxFault1:

- Output state (Low or High) from the Module for CH0 and CH1 respectively

RXLOS0/RXLOS1:

- Output state (Low or High) from the Module for CH0 and CH1 respectively

User should click on **Refresh** button to get the current output signals state.

Rate Select HW Control Contacts:

Speed0-1/ Speed 1-1:

- Set the rate of the Receiver for CH0 and CH1 respectively

Speed0-2/ Speed 1-2:

- Set the rate of the Transmitter for CH0 and CH1 respectively

Reserved Pins:

RSVD / RSVD2:

- As Output: pins are set to High or Low
- As Input: Pins are Tri-stated

Figure 10: SFP-DD HW Signals

4.5 Identification

The Identification tab summarizes module specifications, vendor information and others.

Figure 11: Identification Tab

The following table shows the corresponding ID registers, along with their names and description.

Address	Size (bytes)	Name	Description
128	1	Identifier	Identifier Type of module
129-144	16	Vendor name	Vendor name (ASCII)
145-147	3	Vendor OUI	Vendor IEEE company ID
148-163	16	Vendor PN	Part number provided by vendor (ASCII)
164-165	2	Vendor rev	Revision level for part number provided by vendor (ASCII)
166-181	16	Vendor SN	Vendor Serial Number (ASCII)
182-189	8	Date Code	
190-199	10	CLEI code	Common Language Equipment Identification code
200-201	2	Module power characteristics	
202	1	Cable assembly length	
203	1	Media Connector Type	
204-209	6	Copper Cable Attenuation	
210-211	2	Cable Assembly Lane Information	
212	1	Media Interface Technology	
213-220	8	Reserved	
221	1	Custom	
222	1	Checksum	Includes bytes 128-221
223-255	33	Custom Info NV	

4.6 Options Available

This tab specifies the options implemented in the module.

Figure 12: Options Available Tab

The following table shows the corresponding registers, along with their names and description.

151	7	Detector type	0b=PIN detector 1b=APD detector	RO RQD
	6-5	Rx Output Eq type	00b=Peak-to-peak amplitude stays constant, or not implemented, or no information 01b=Steady-state amplitude stays constant 10b=Average of peak-to-peak and steady-state amplitude stays constant 11b=Reserved	
	4	Rx Optical Power Measurement type	0b=OMA 1b=average power	
	3	Rx LOS type	0b=Rx LOS responds to OMA 1b=Rx LOS responds to Pave	
	2	Rx LOS fast mode implemented	0b=Rx LOS fast mode not implemented 1b=Rx LOS fast mode implemented Refer to form factor hardware specification for timing requirements	
	1	Tx Disable fast mode implemented	0b=Tx Disable fast mode not implemented 1b=Tx Disable fast mode implemented Refer to form factor hardware specification for timing requirements	
	0	Module-Wide Tx Disable	0b=Tx Disable implemented per lane 1b=Any Tx Disable control bit being set disables all Tx lanes	

152	7-0	Per lane CDR Power saved	Minimum power consumption saved per CDR per lane when placed in CDR bypass in multiples of 0.01 W rounded up to the next whole multiple of 0.01 W	RO Opt.

4.7 Load/Save MSA

This tab allows the user to Load or Save his custom MSA configuration.

Data is displayed in a grid showing: register address, hex value, Decimal Values, ASCII value, MSA description.

Also the buttons available in this tab are summarized below:

- **Refresh Page:** Read MSA Registers, and refresh values.
- **Write MSA to HW:** Write the current MSA configuration to the module.
- **Save MSA to file:** Save the current MSA memory to a file using Comma separated values (CSV) format.
- **Load MSA from file:** Load MSA values from file and map it to MSA memory.
- **Checksum for pages 00, 01 and 02**

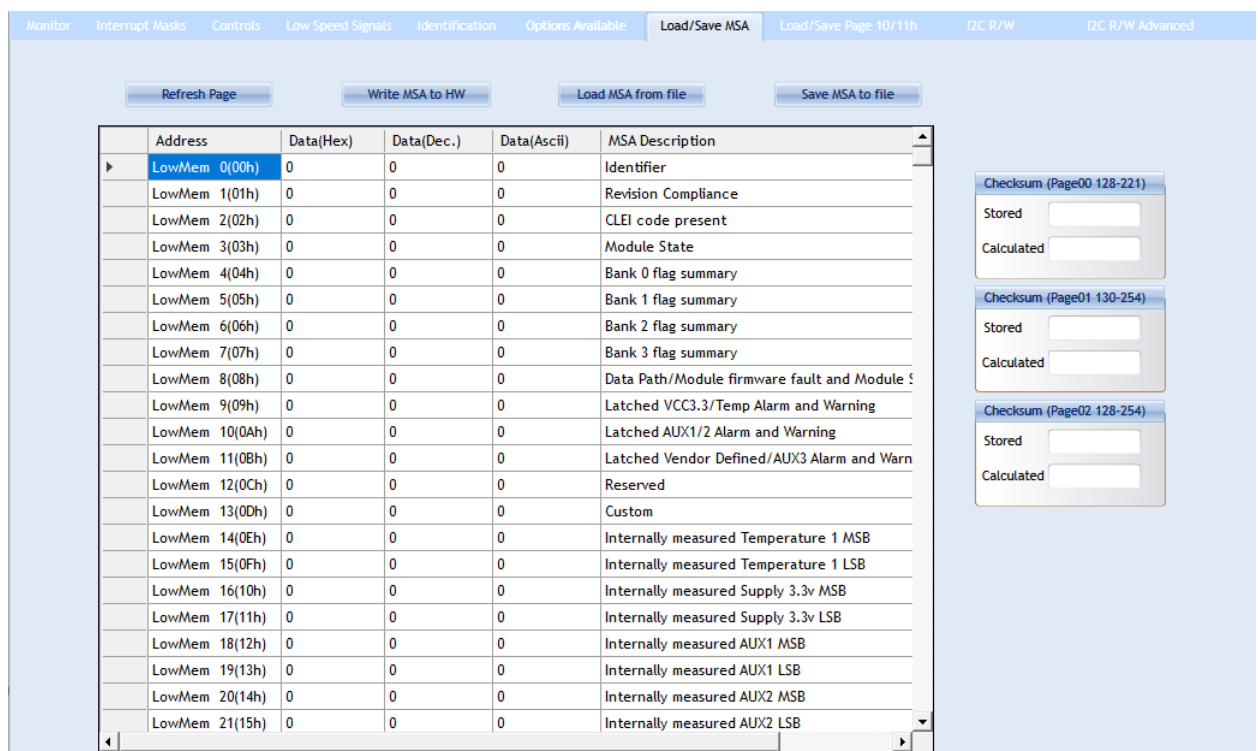

Figure 13: Load/Save MSA Tab

4.8 Load/Save Page 10/11h

This tab allows the user to Load or Save configuration for Page10h and Page11h.

Data is displayed in a grid showing: register address, hex value, Decimal Values, ASCII value and MSA description. Buttons in this tab are described below:

- **Refresh Page:** Read Registers, and refresh values.
- **Write MSA to HW:** Write the current MSA configuration to the module.
- **Save MSA to file:** saves the current MSA memory to a file using Comma separated values (CSV) format.
- **Load MSA from file:** Loads MSA values from file and map it to MSA memory.

Figure 14: Load/Save Page 10/11h Tab

4.9 I2C R/W

This tab gives access to MSA registers.

1. Select the page in the **Memory Location**.
2. **Single Byte** window: to read/write one byte from the memory.
 - a. Address: The address to read/write from.
 - b. Memory Content: The data value read from or written to the selected address.
3. **Multi-bytes** window: to read multiple bytes between selected Starting Address and an End Address.

Figure 15: I2C R/W Tab

4.10 QDD MXP

This tab is used only with ML4062-MCB-MXP.

The following tab allows the user to modify the DC Level within a range between 3.0 and 3.6, and to insert noise to the VCC by adding noise frequency between 0 and 12500000 Hz and control noise amplitude ranging from 0 to 120mV.

Two buttons are available under Noise Insertion Window:

1. **Apply:** this must be pressed so the noise frequency and amplitude take effect
2. **Reset:** this will set noise frequency and amplitude back to 0

Figure 16: QDD MXP Tab

4.11 I2C R/W Advanced

This tab gives access to MSA registers without specifying the Slave address.

1. Select **Page Number** under **Memory Location** window.
2. Under **Single Byte** window.
 - Write the corresponding **Slave Address**
 - Write the **Address** to read from or write to
 - Data to be written to or Read from the selected address is under **Memory Content** field
3. Under **Multi-Byte Read** window.
 - Write the corresponding **Slave Address**
 - Select the **Starting Address** and the **End Address** to Read from

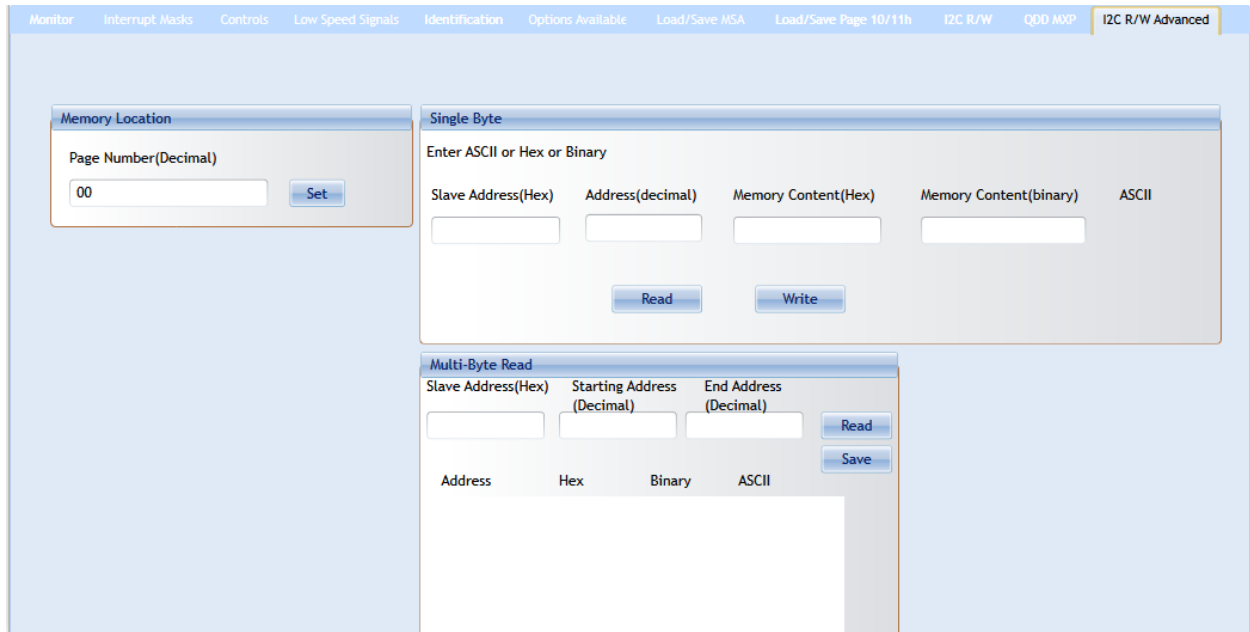

Figure 17: I2C R/W Advanced Tab

4.12 Command Data Block (CDB) Message Communication

The Common Data Block (CDB) is a message communication protocol between the Host and a Module that allows the user to check and apply various settings on the interconnect, including updating the firmware. CDB is a Two Wire serial Interface (TWI) protocol based on the i2c for CMIS 4.0 and 5.0 between a Master (Initiator in 5.0) and Slave (Target in 5.0).

The host sends a CDB Command (CMD) message which is identified by a CMD ID and the module responds with a CDB Reply (REPLY) message without changing the CMD ID.

On the ML4062 Module Compliance Board (MCB), the CDB enables the issuing of commands from the MCB to the interconnect. The ML4062 MCB includes all CDB commands mentioned in CMIS 4.0 and CMIS 5.0.

Unlock CDB feature by loading the purchased License File:

Figure 21: CDB License Validation

4.12.1 CDB Commands

- CMD 0000h Query Status
- CMD 0001h Enter Password
- CMD 0002h Change Password
- CMD 0003h Enable/Disable Password Protection
- CMD 0004h General Abort
- CMD 0380h Loopbacks

Figure 22: CDB Commands

The CDB GUI includes detailed map registers that show what is returned by each command. Here, for example, the query status command is being sent. A progress bar indicates the progress of the running CDB command. The GUI clearly indicates that the command was sent successfully (CDB status=1), that it asserts the CDB flag, and that it returns three bytes of data as shown with the corresponding value and description. The User can export this data (to an excel sheet) using the export button.

4.12.2 CDB Feature and Capabilities Commands

- **CMD 0040h Module Features:** Identifies which commands are supported, from CMD 0 to CMD 00FF along with the maximum CDB command execution time.
- **CMD 0042h Performance Monitoring:** Identifies which commands are supported from 0200h to 02FFh.
- **CMD 0043h Bert and diagnostics:** Identifies CMD 0300h to 03FFh.
- **CMD 0041h Read FW Features:** Identifies many parameters supported the firmware features including firmware download transfer type, if copy/abort/full image readback commands are supported, start command payload size, erased byte, the firmware update features, if read/write firmware is supported, the firmware can be upgraded, etc. Use this feature to determine whether a device supports LPL or EPL firmware.

Figure 23: CDB Feature and Capabilities Commands

The green buttons indicate which commands are supported. In this case, the module feature command is returning the corresponding data in the detailed map register and indicates that CMDs 0,1,2,40,41,42,43 are supported (other modules might support other commands).

4.12.3 CDB Firmware Download Commands

- **CMD 0101h, 0103h, 0107h Program LPL:** Loads the firmware binary file for Local Payload (LPL). Allows for updating interconnect firmware.
- **CMD 0101h, 0104h, 0107h Program EPL:** Loads the firmware binary file for Extended Payload (EPL). EPL support varies depending on the interconnect. Allows for updating interconnect firmware.
- **CMD 0101h, 0105h, 0107h Read Image LPL:** Read the latest upgraded firmware image using LPL

- **CMD 0101h, 0106h, 0107h Read Image EPL:** Read the latest upgraded firmware image using EPL.
- **Export Image:** Exports an image of the firmware after the read is completed as a .bin file, which in turn can be loaded into and read by other interconnects.
- **CMD 0102h Abort FW download:** Stops the firmware from being installed onto the interconnect.
- **CMD 0109h Run image:** After the new LPL or EPL Firmware is loaded, this command switches to the latest firmware image. Does not replace the existing firmware image on the interconnect.
- **CMD 010Ah Commit image:** Replaces the firmware image on the interconnect with the new loaded firmware image. Prior to this command being executed, the old firmware will still be executed on startup. Always ensure the new image is running perfectly (by running it on the interconnect using the previous commands) before using this command.
- **CMD 0108h Copy image A to B/B to A:** In the event of two images being present on the same interconnect and both images are written to flash, this command makes ensures that both images are identical, with the copied image being specified in the commands as either image A to image B, or image B to image A.
- **CMD 0100h Get FW Info:** Loads the information about the latest firmware on the interconnect, for both image A and image B.

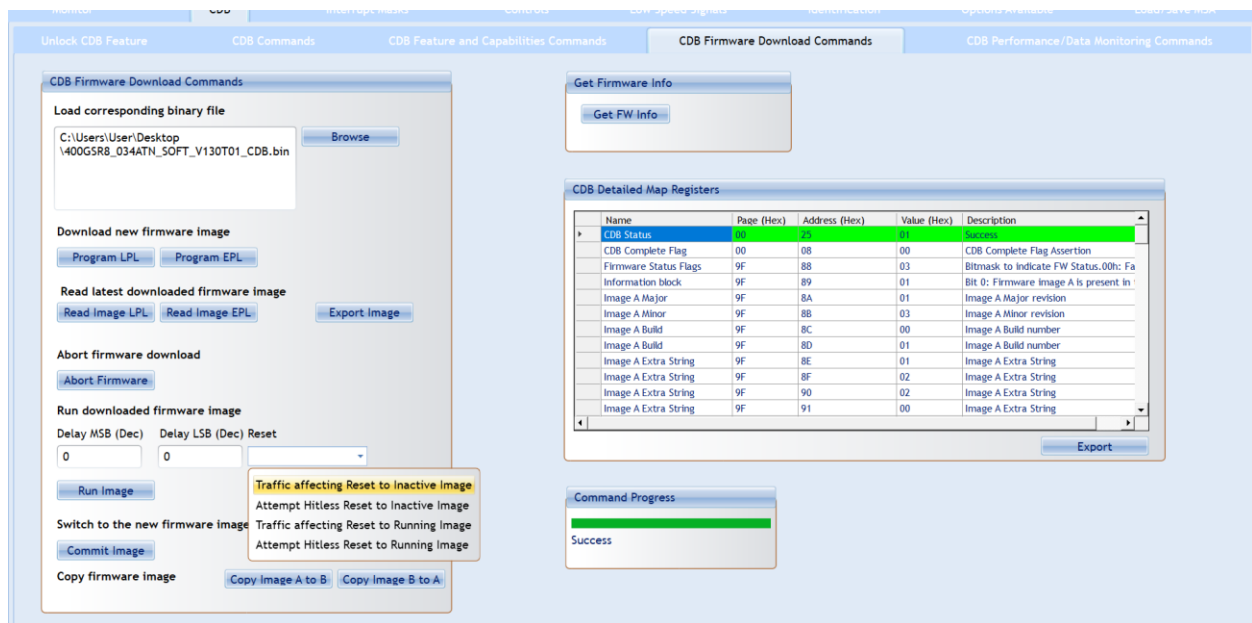

Figure 24: CDB Firmware Download Commands

4.12.4 CDB Performance/Data Monitoring Commands

- **CMD 0200h PM Controls:** Extract Performance Monitoring data records such as minimum/average/maximum values. “No Operation” reads the most recent values, while “Clear All” clears the extracted values for all lanes in the interconnect.

- **CMD 0201h PM Feature Information:** Reads the PM’s additional features.
- **CMD 0280h Data Monitoring and Recording Controls:** “Refresh” loads the most recent attributes. “Clear All” clears all values for all parameters for all lanes at the same time.
- **CMD 0281h Data monitoring and recording advertisement**
- **CMD 0290h Temperature Histogram:** Displays the temperature intervals of the interconnect and how long it stayed at each temperature interval.
- **CMD 0210h, 0211h Get Module PM LPL/EPL:** Choose parameters of the module’s performance monitoring records, and replace the current values of the minimum, average, and maximum values. “Refresh” replaces the old values, while “Clear and Read” reads and resets the old values.
- **CMD 0212h, 0213h Get PM Host Side LPL/EPL:** Choose parameters of the host’s performance monitoring records, and replace the current values of the minimum, average, and maximum values. “Refresh” replaces the old values, while “Clear and Read” reads and resets the old values.
- **CMD 0214h, 0214h Get PM Media Side LPL/EPL:** Choose parameters the performance monitoring records of specific lanes, and replace the current values of the minimum, average, and maximum values. “Refresh” replaces the old values, while “Clear and Read” reads and resets the old values.
- **CMD 0216h, 0217h Get Data Path PM LPL/EPL:** Choose the data path for specific lanes and replace the current values of the minimum, average, and maximum values. “Refresh” replaces the old values, while “Clear and Read” reads and resets the old values.

Figure 25: CDB Performance/Data monitoring Commands

Software Revision

V2.2.1: latest Software Revision, which this document is based on.
