## QSFP\_DD API Documentation

### 1. Introduction

This document describes the various Application Programming Interface (API) functions for the Multilane QSFP\_DD host board (ML4062). Each function is described with its parameters and return values.

#### 1.1. Acronyms and abbreviations

<b>API</b>	Application Programming Interface
<b>DLL</b>	Dynamic Link Library (.dll file)
<b>USB</b>	Universal Serial Bus
<b>I2C</b>	Inter-Integrated Circuit

### 2. APIs

#### 2.1. General Functions

##### 2.1.1. USB Connection

###### ▪ ConnectToHost

<b>Description</b>	Opens a USB connection to QSFP_DD Host
<b>Call</b>	<b>bool __stdcall ConnectToHost(UInt16 Instance)</b>
<b>Parameters</b>	UInt16 Instance: USB instance of plugged host
<b>Returns</b>	True or False

###### ▪ Disconnect

<b>Description</b>	Disconnects from CFP2 Host and close open USB connection
<b>Call</b>	<b>bool __stdcall Disconnect(UInt16 Instance)</b>
<b>Parameters</b>	UInt16 Instance: USB instance of plugged host
<b>Returns</b>	True or False

##### 2.1.2. Monitoring

###### ▪ P3V3\_Current\_Monitor

<b>Description</b>	Measures current value on the 3.3V line
<b>Call</b>	<b>bool __stdcall P3V3_Current_Monitor(UInt16 Instance, double* data)</b>
<b>Parameters</b>	UInt16 Instance: USB instance double* data: Current value in mA
<b>Returns</b>	True or False

## QSFP\_DD API Documentation

### GetVCC

<b>Description</b>	Measures voltage on the VCC1 line
<b>Call</b>	<b>bool __stdcall GetVCC(int Instance, double* Data)</b>
<b>Parameters</b>	UInt16 Instance: USB instance double* data: VCC1 value in V
<b>Returns</b>	True or False

## 2.2. QSFP\_DD MSA functions

### 2.2.1. I2C access

#### I2CRead

<b>Description</b>	Reads I2C
<b>Call</b>	<b>bool __stdcall I2CRead(int Instance, BYTE SlaveAddress, BYTE registerAddress, BYTE* ReadBuff, BYTE Length);</b>
<b>Parameters</b>	int instance: USB instance BYTE SlaveAddress: Slave Address which is 0xA0 BYTE registerAddress: Register to read data from BYTE* ReadBuff: Pointer to the data that is read BYTE Length: Number of registers read sequentially (max=32)
<b>Returns</b>	True or False

#### I2CWrite

<b>Description</b>	Writes I2C
<b>Call</b>	<b>bool __stdcall I2CWrite(int Instance, BYTE SlaveAddress, BYTE Register , BYTE Value);</b>
<b>Parameters</b>	int instance: USB instance BYTE SlaveAddress: Slave Address which is 0xA0 BYTE Register: Register where the data will be written BYTE Value: The value to write on the Register
<b>Returns</b>	True or False

### 2.2.2. Alarms and controls signals

#### MODPRS

<b>Description</b>	Reads the opposite of MODPRS_L QSFP_DD pin to check if the QSFP_DD module is inserted in the Host.
<b>Call</b>	<b>bool __stdcall MODPRS(UInt16 Instance, bool* status)</b>
<b>Parameters</b>	UInt16 Instance: USB instance bool* status: True if HW pin is 0 : module present False if HW pin is 1 : module absent
<b>Returns</b>	True or False

## QSFP\_DD API Documentation

### ■ LPMODE

<b>Description</b>	Asserts/Deasserts LPMODE
<b>Call</b>	<b>bool __stdcall LPMODE(UInt16 Instance, bool asserted)</b>
<b>Parameters</b>	UInt16 Instance: USB instance bool asserted: True to assert LPMODE False to deassert LPMODE
<b>Returns</b>	True or False

### ■ RESET

<b>Description</b>	Asserts/Deasserts RESET (inverse of RESET_L pin)
<b>Call</b>	<b>bool __stdcall RESET (UInt16 Instance, bool asserted)</b>
<b>Parameters</b>	UInt16 Instance: USB instance bool asserted: True to assert RESET (RESET_L pin: 0) False to deassert RESET (RESET_L pin: 1)
<b>Returns</b>	True or False

### ■ MODSEL

<b>Description</b>	Asserts/Deasserts MODSEL (inverse of MODSEL_L pin)
<b>Call</b>	<b>bool __stdcall MODSEL(UInt16 Instance, bool asserted)</b>
<b>Parameters</b>	UInt16 Instance: USB instance bool asserted: True to assert MODSEL (MODSEL_L pin: 0) False to deassert MODSEL (MODSEL_L pin: 1)
<b>Returns</b>	True or False

### ■ IntL

<b>Description</b>	Reads the opposite INT_L QSFP_DD pin
<b>Call</b>	<b>bool __stdcall IntL(int Instance, bool* status)</b>
<b>Parameters</b>	int Instance: USB instance bool* status: True if HW pin is 1 False if HW pin is 0
<b>Returns</b>	True or False
